

The fan journey in the stadium of the future

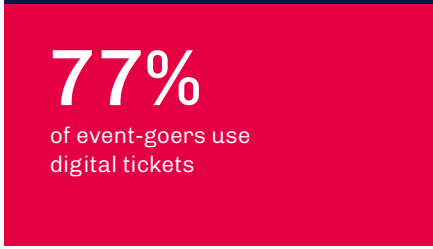

What does the fan experience look like in the stadium of the future? It will be seamless. Secure. Interactive. Convenient. So fans don't have to worry about anything but enjoying themselves.

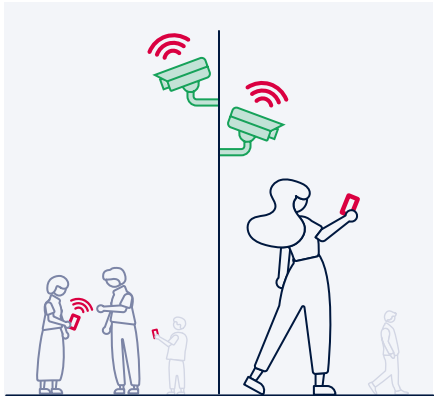

1 Arriving

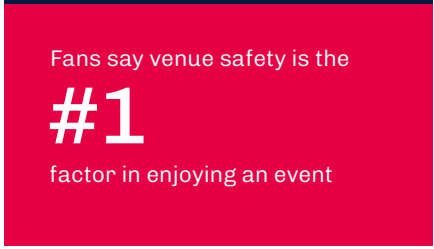

As fans enter the stadium, scanners automatically log their e-tickets. So there's no waiting in line to get to the good stuff.

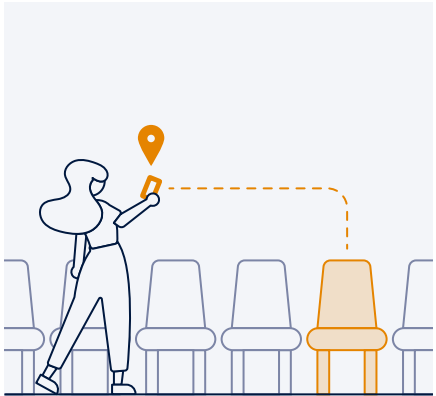

2 Security

Smart cameras scan crowd movement and behaviour, stopping fans only if something seems amiss. So fans stay safe – without having to deal with tedious security lines.

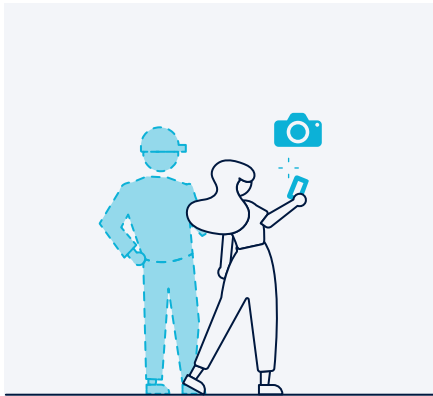

3 Wayfinding

Fans get personalised directions straight to their seats. So there's no risk of getting lost and missing any part of the show.

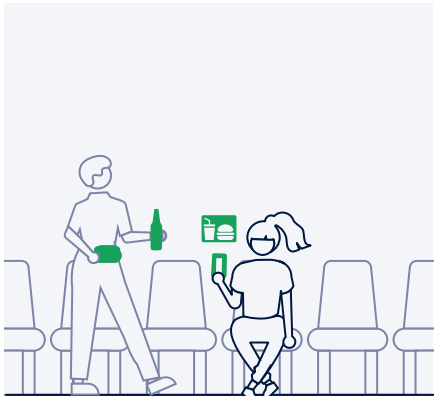

4 AR selfie opportunity

On the way to their seats, they stop to take a selfie with an AR rendition of their favourite player. Helping fans feel connected with a more immersive experience.

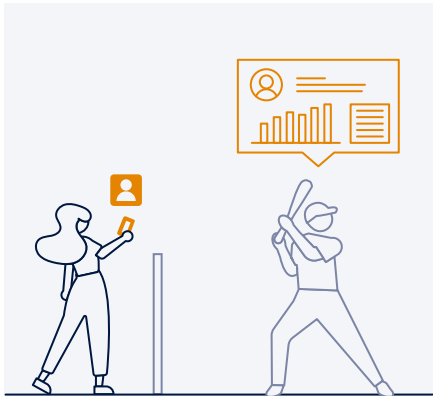

5 In-seat ordering

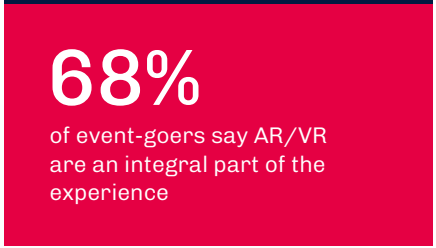

They can use their phones to buy snacks, delivered to their seats. No fuss. No waiting. So fans don't miss a second of the action.

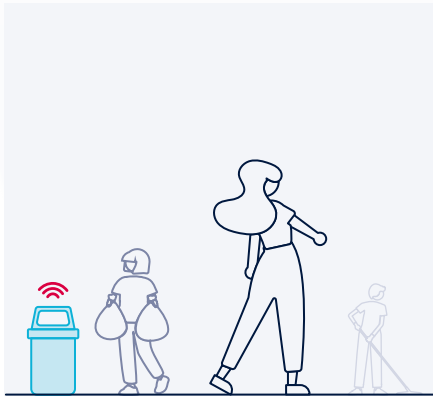

6 AR stats

They can use an AR overlay to see stats on player speed, current and past performance, and more – all in real time. Enabling fans control their own viewing experience.

7 Maintaining cleanliness

Connected sensors let custodial staff know when trash cans need emptying or supplies are running low. Providing fans with a clean, comfortable experience throughout the event.

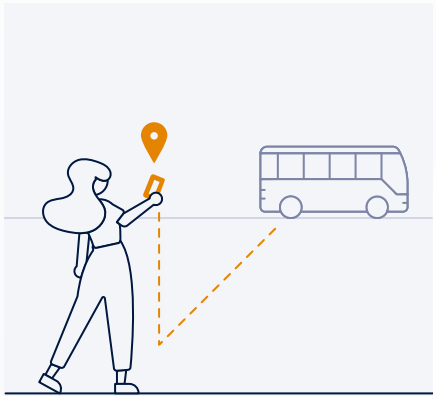

8 Sports betting

They view real-time stats on their phones and place bets without going anywhere. So fans can score big when their team wins.

9 Leaving

After the game, they can get directions to the best exit to take, whether they're heading to the parking lot or catching a bus. So leaving is just as seamless as arriving.
